TINRO-Centre Macrofauna Inventory

a series of 12 tabular reference books

All **12 volumes** (totaling **7187 pages**) include tables showing the occurrence (%), number (ind./km²) and biomass (kg/km²) and its standard errors of each marine species averaged over different bathymetric zones vertically, biostatistical areas horizontally and seasonal and long-term periods in time

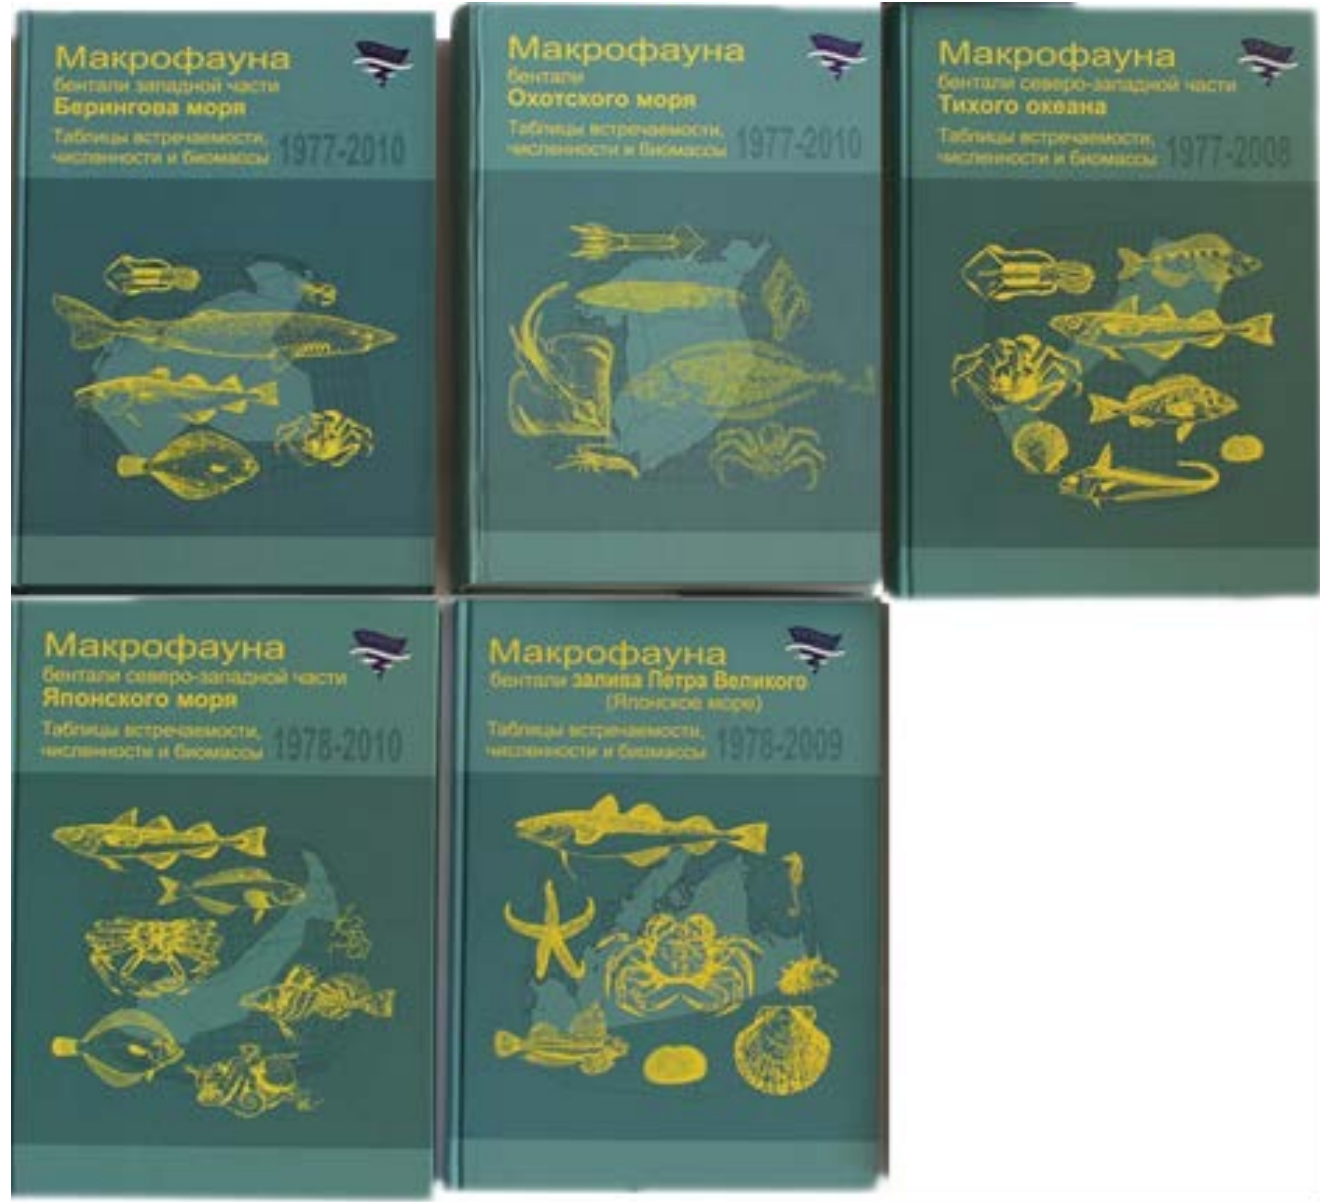

Four tabular reference books [1-4], which summarize data on species and groups of **nekton** in the Russian Far Eastern seas and adjacent northwestern Pacific Ocean

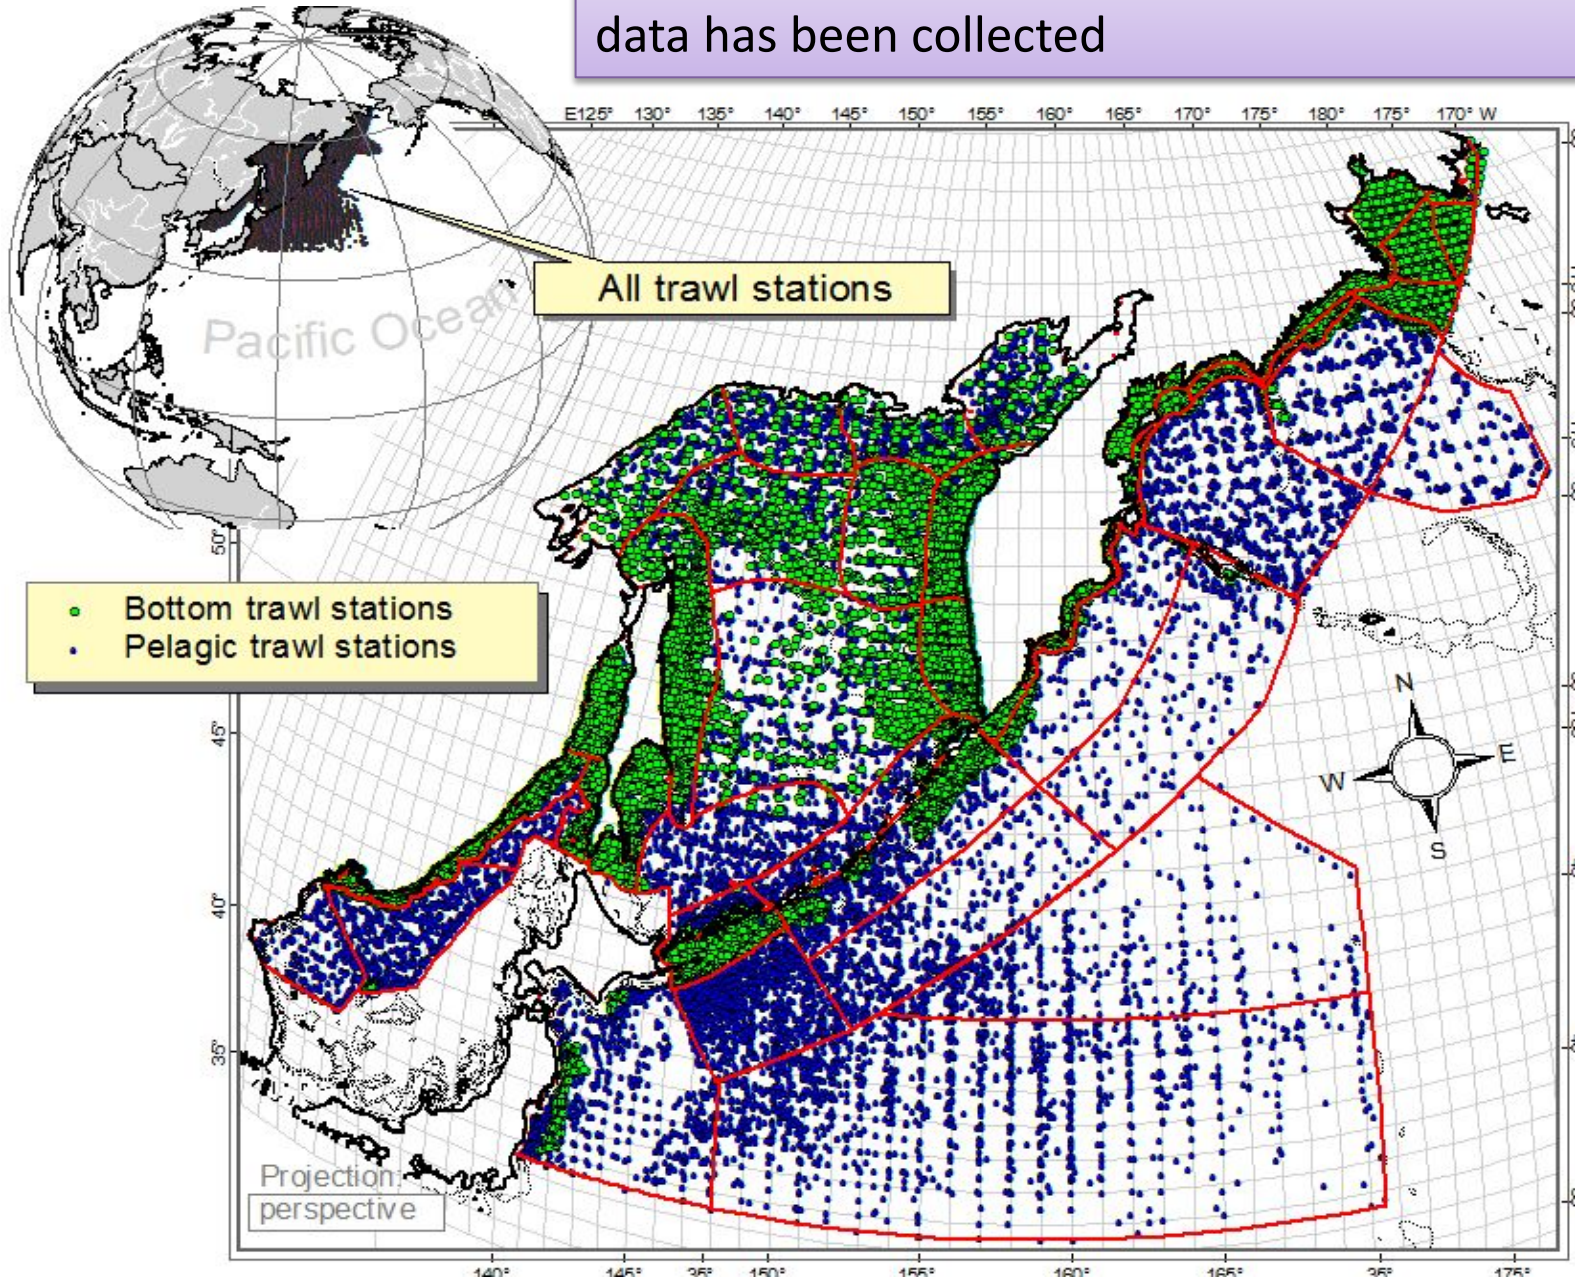

Three tabular reference books [5-7], which summarize data on all species and groups of **pelagic macrofauna** in the Russian Far Eastern seas and adjacent northwestern Pacific Ocean

Five tabular reference books [8-12], which summarize data on **benthic and nekton-benthic** species and groups in the Russian Far Eastern seas and adjacent northwestern Pacific Ocean

Location of trawl stations in 48 standard biostatistical areas (red lines) of regular monitoring by TINRO, where data has been collected

The results of the work of a huge number of researchers
