NPZ

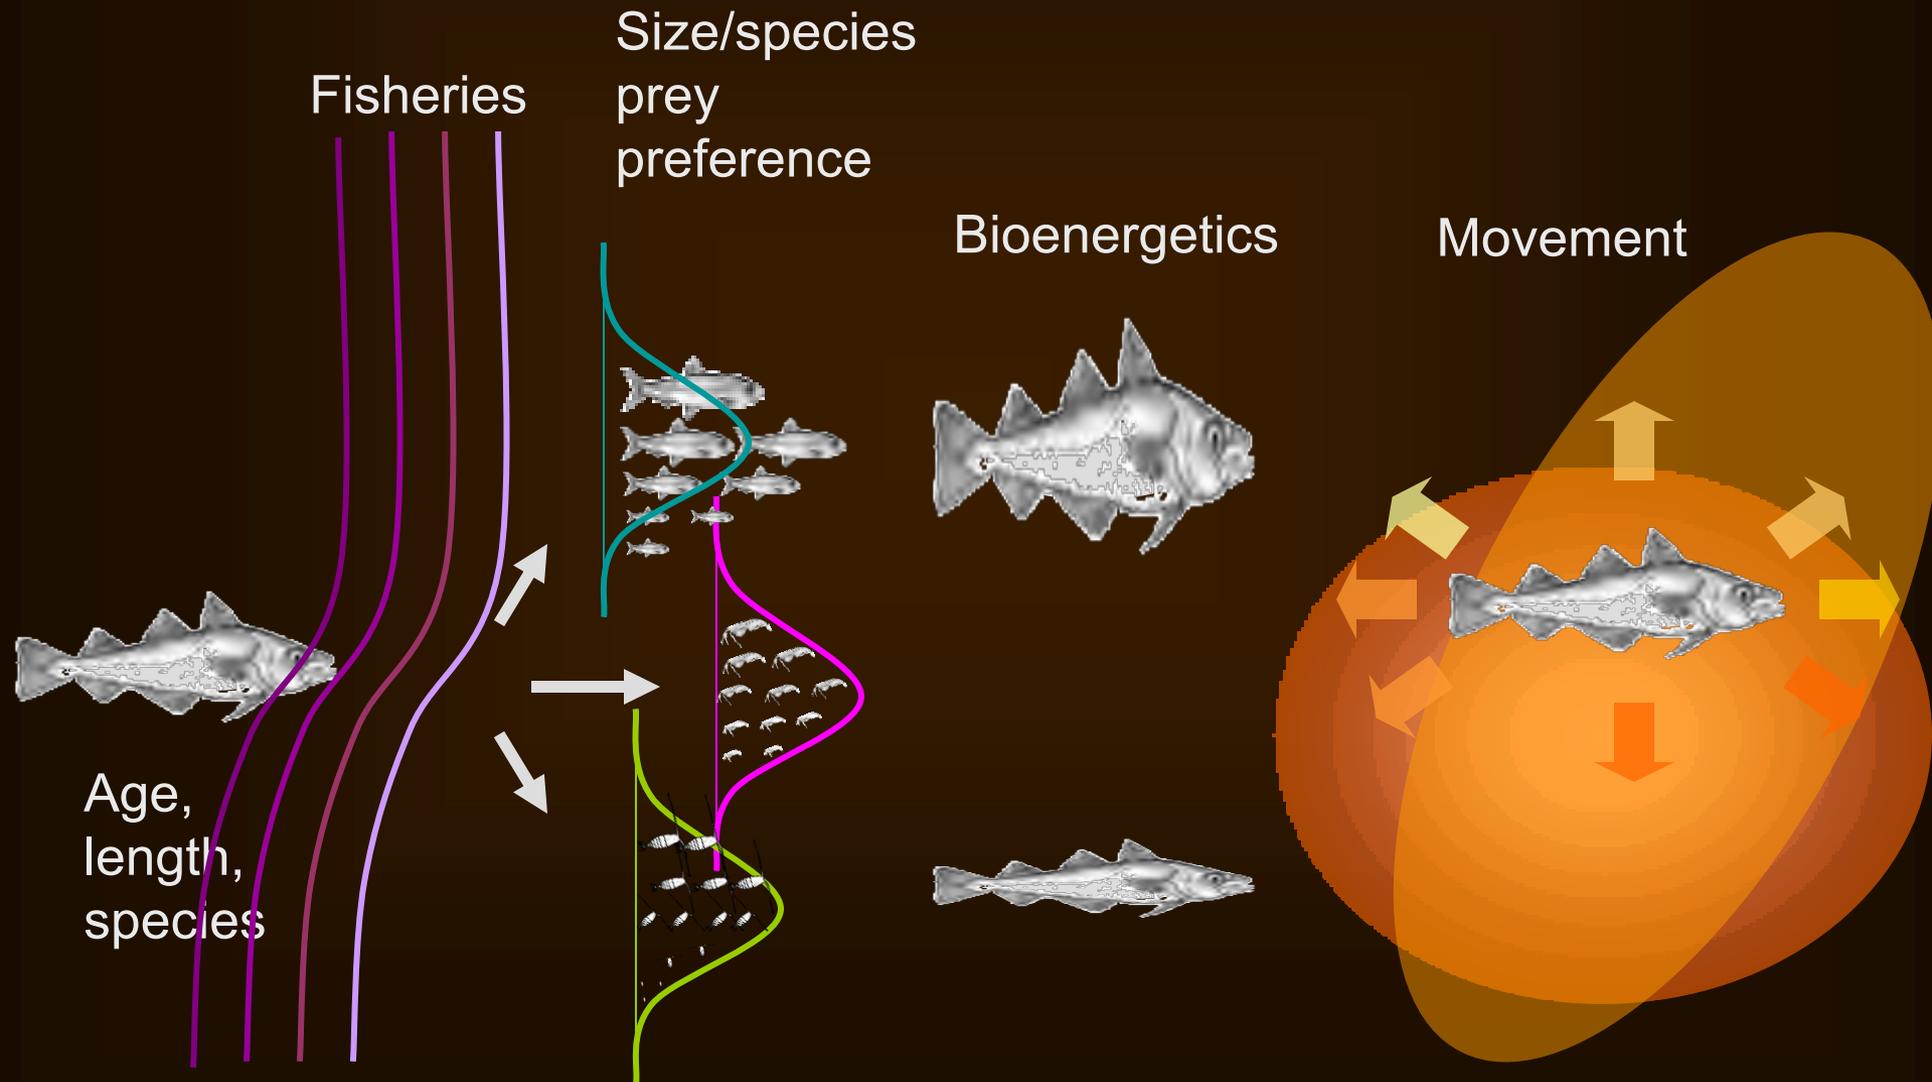

Importance of Seasonal Sea Ice:

Ice algae: Importance to early reproduction in copepods

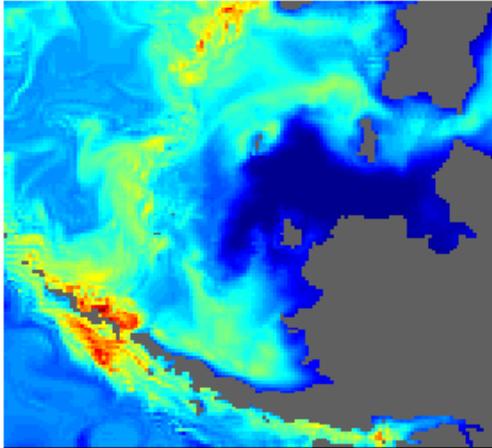

Both *Calanus* spp. and *T. raschii* have higher ingestion when feeding on ice algae (green) than when feeding on ambient water column phytoplankton (blue)

FEAST

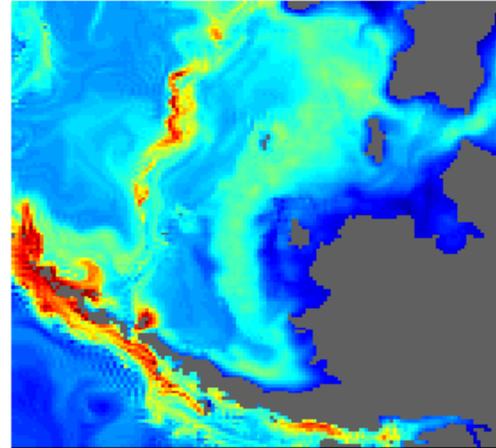

Prey Fields and temperature – foraging potential for an 8 cm (age 0) pollock

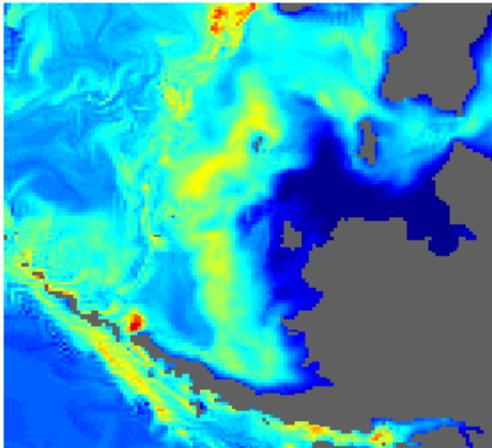

July 1975 (cold)

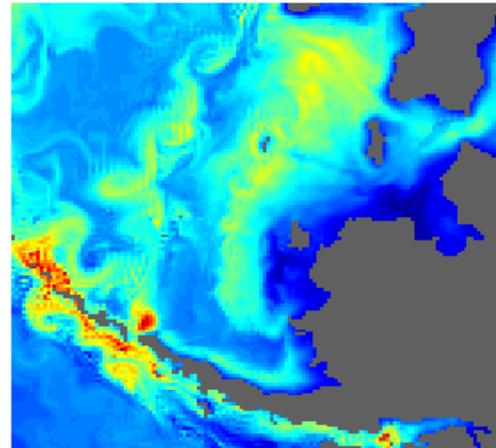

July 2004 (warm)

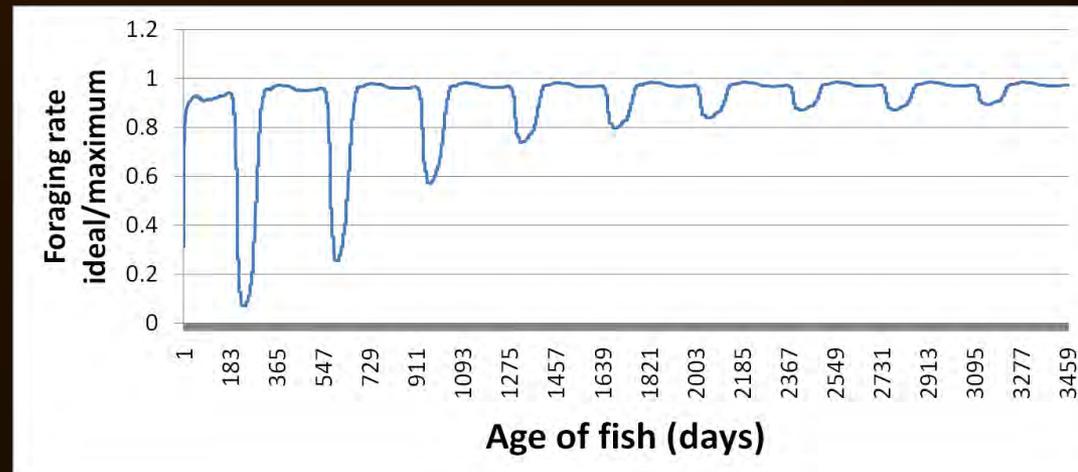

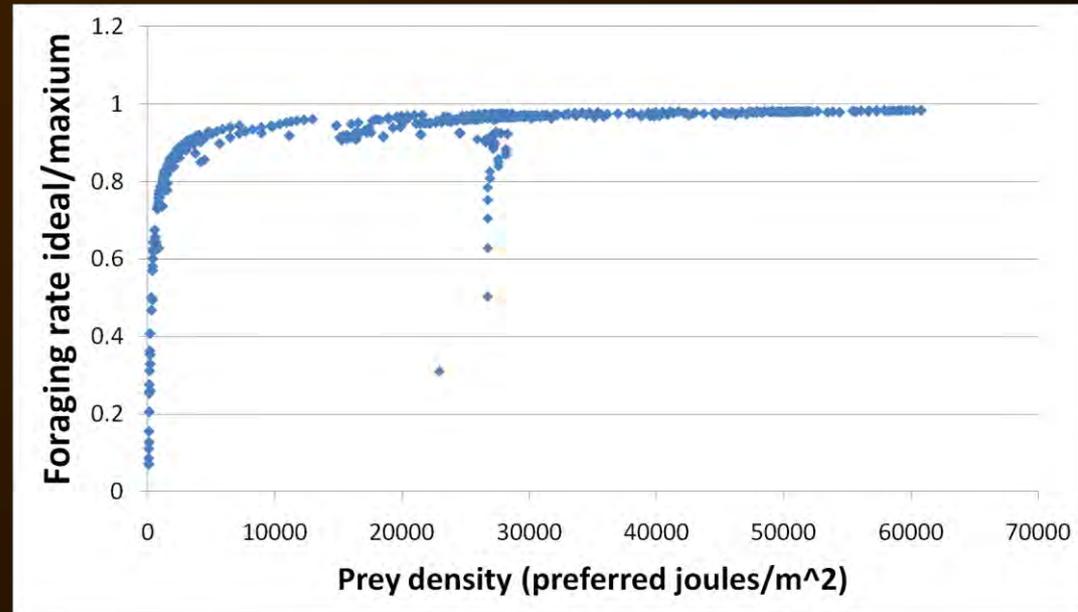

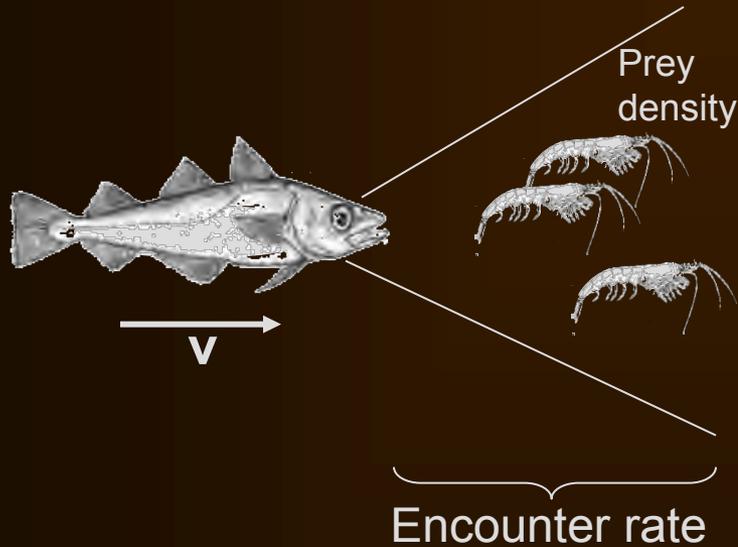

July 2008 (cold)

July 2040 (warm)

Linking foraging and bioenergetics into functional responses

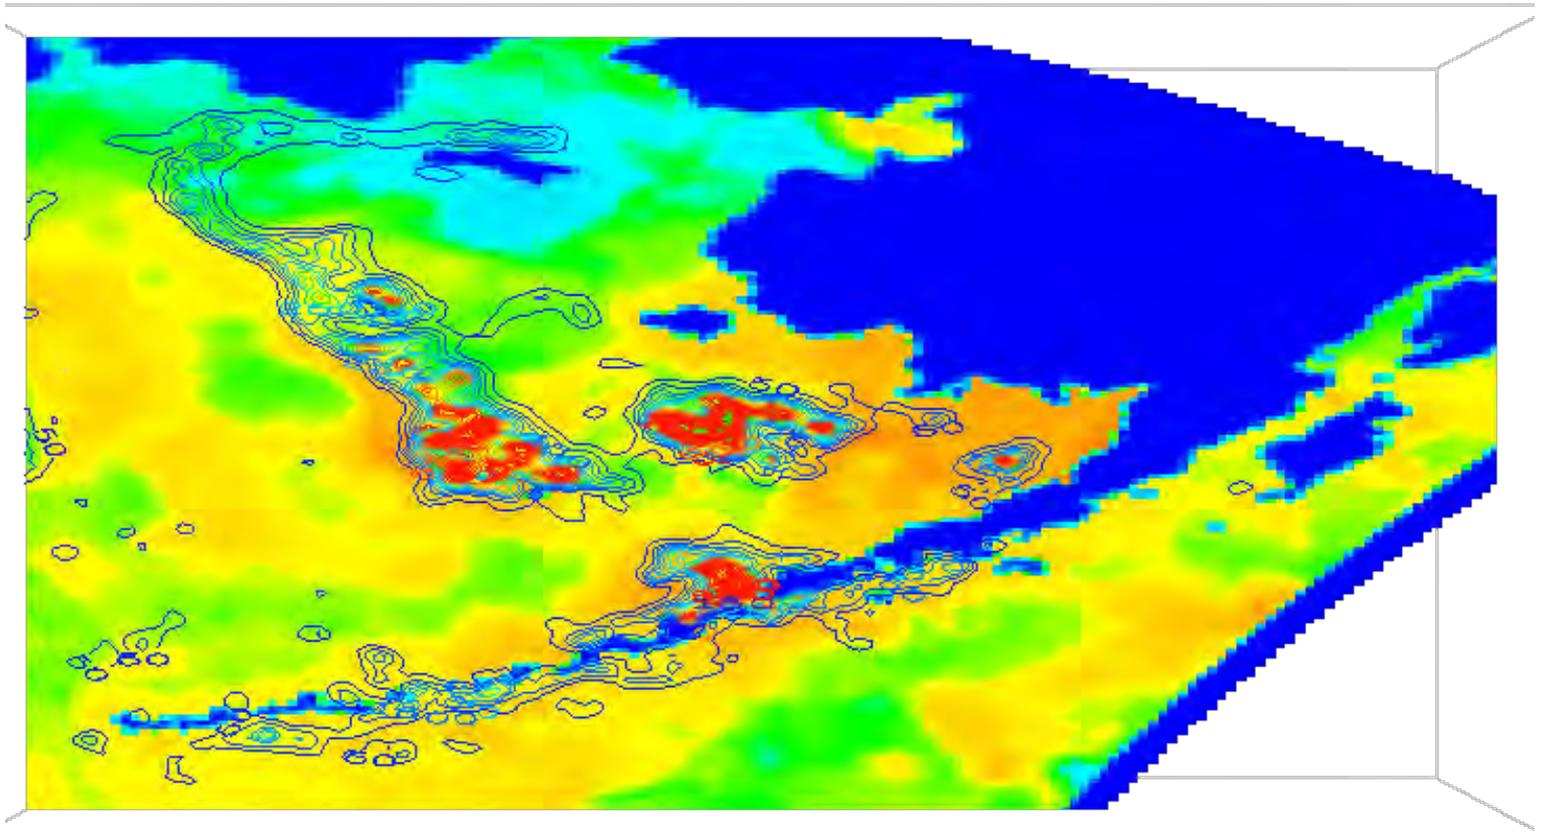

Useful consumption (joules) = $f(V, T, L)$

Respiration (joules) = $A_v V^{B_v} * f_r(T)$

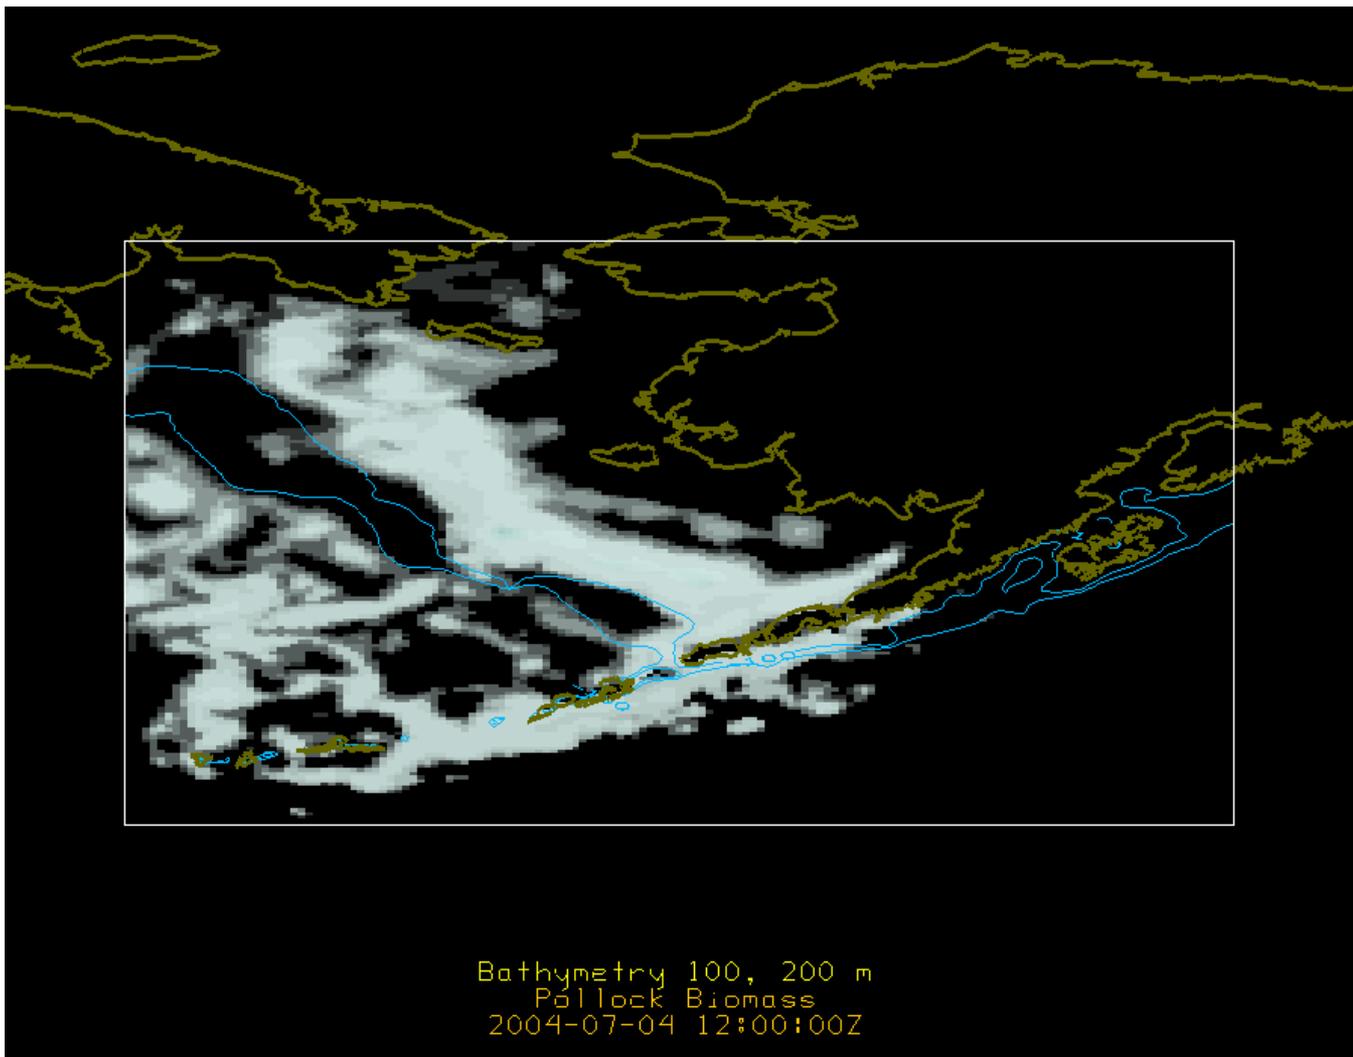

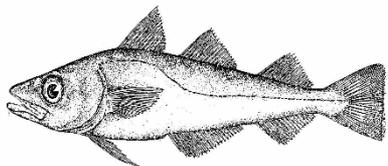

Pollock and euphausiid densities

Modeled age 5 pollock biomass (colored contours) and 0-300m integrated euphausiid density (color field) for July, 2004. The location of primary pollock concentrations along the northwest shelf break and in the Unimak Pass area shows a strong correspondence with historical distributions.

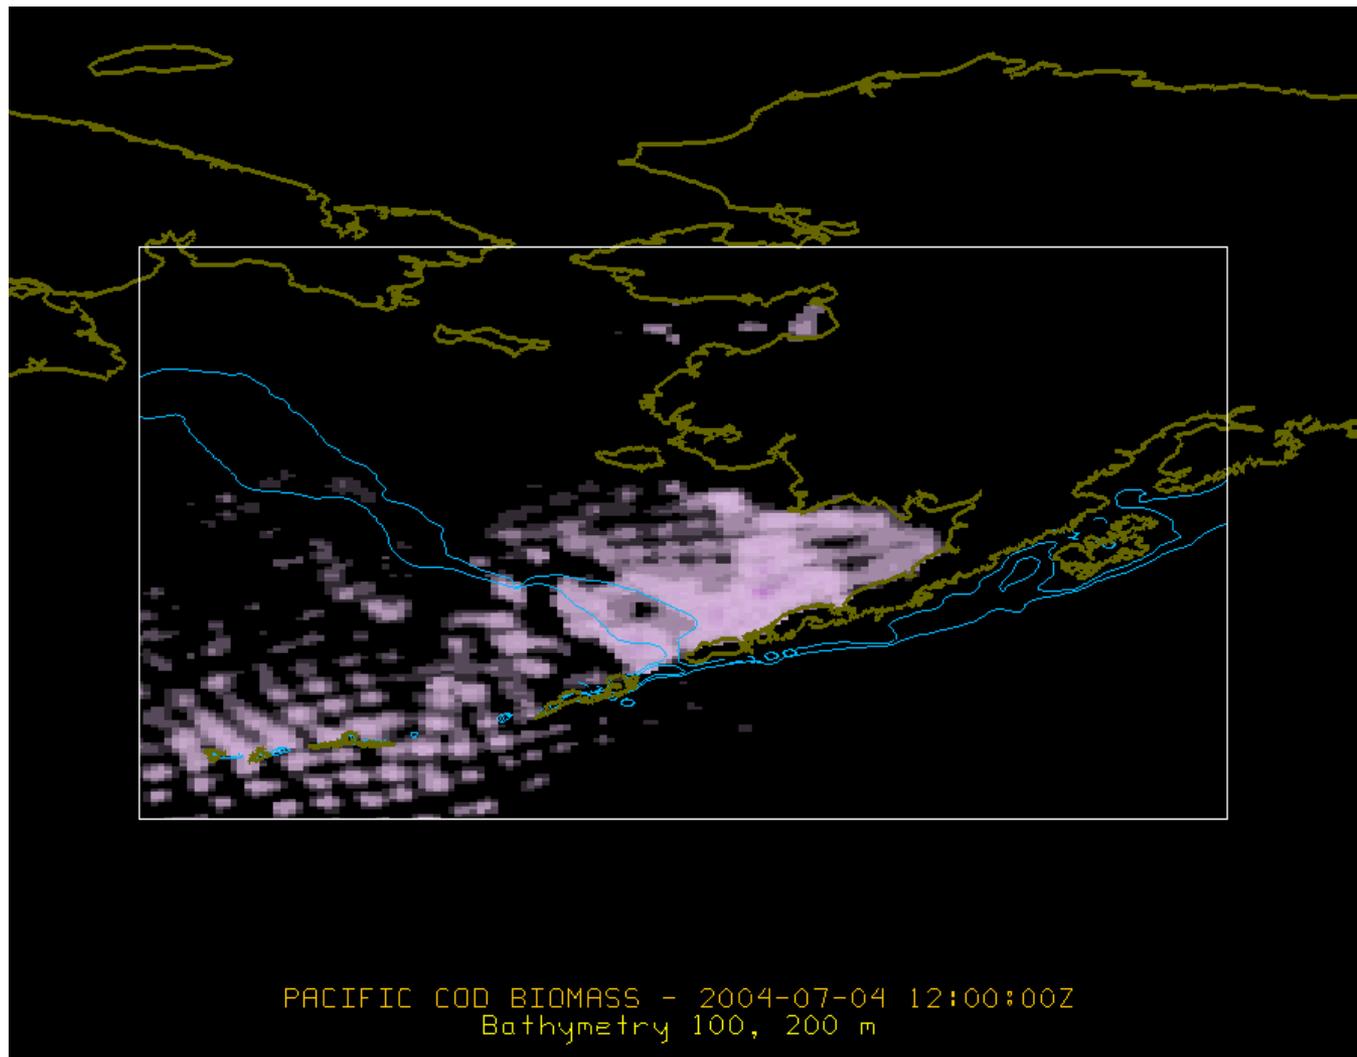

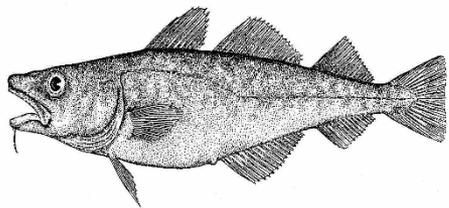

Walleye Pollock

July 2004

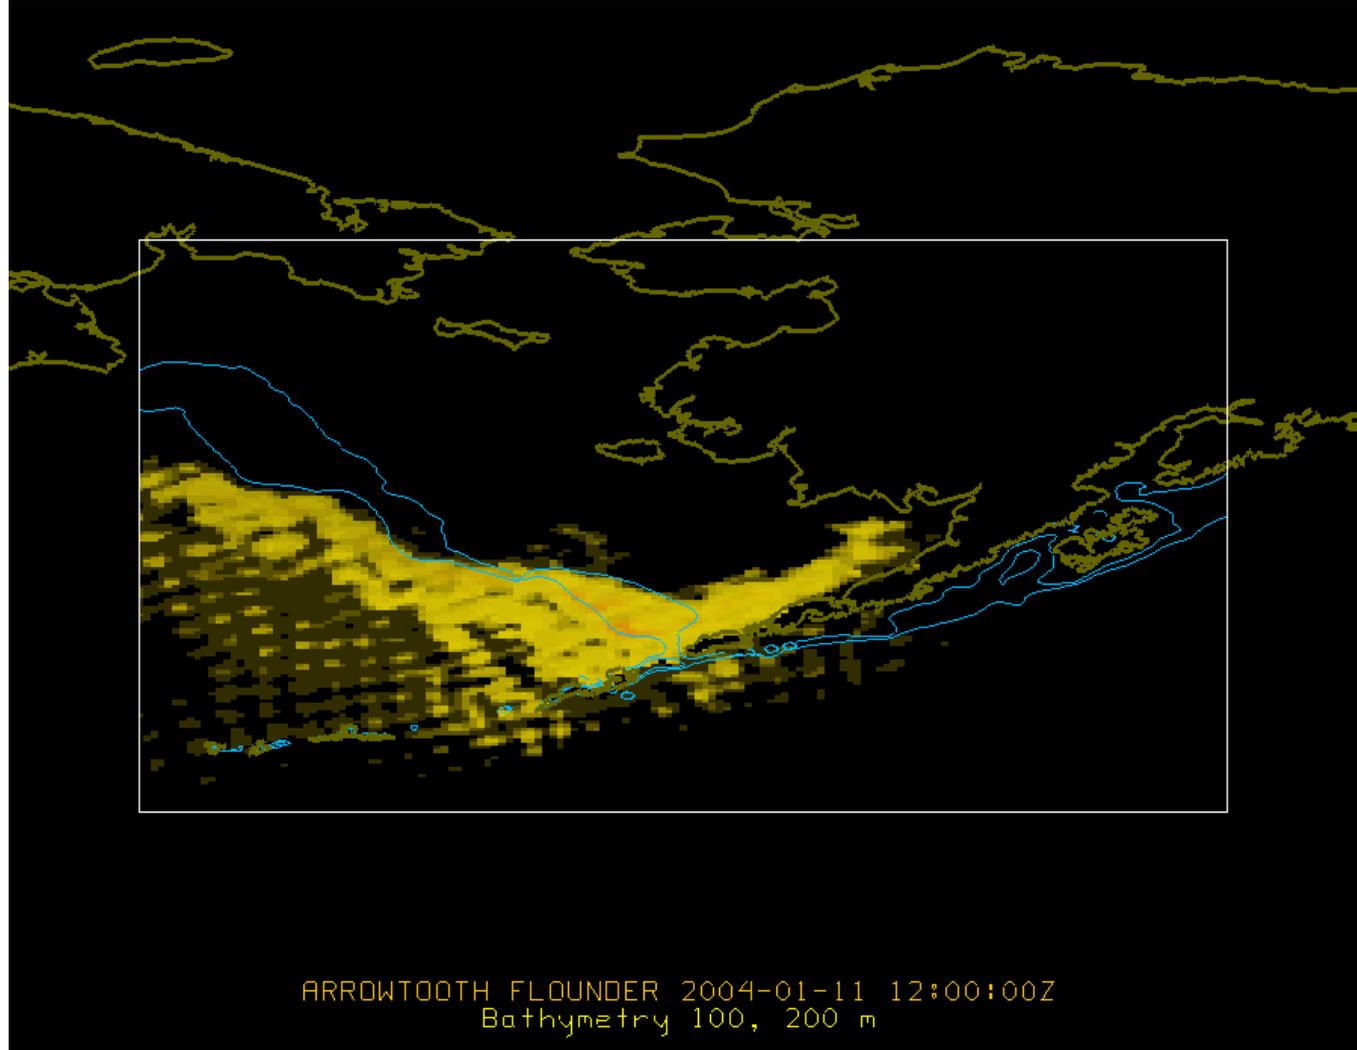

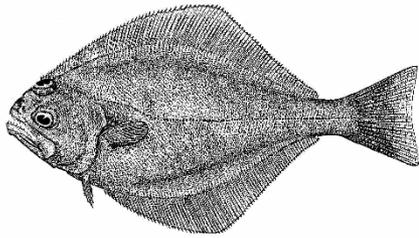

Pacific Cod

July 2004

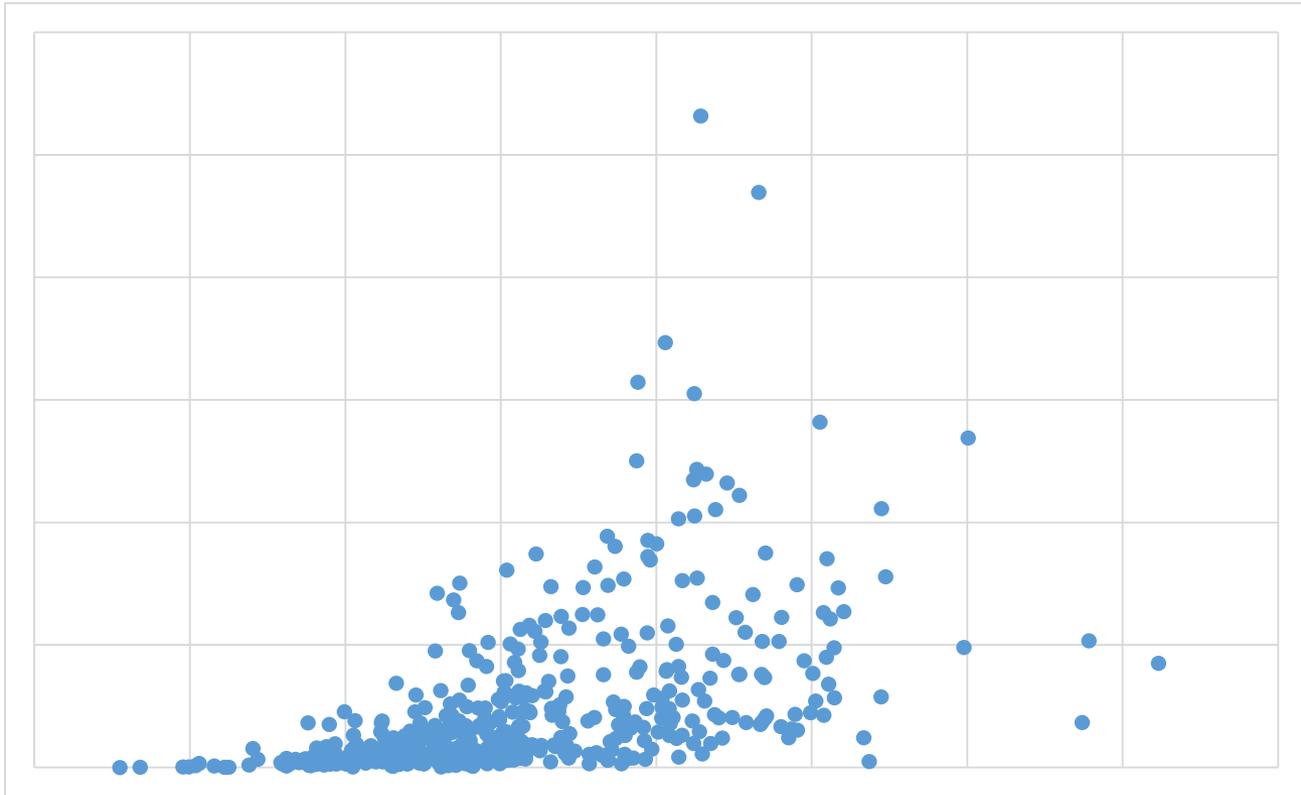

Arrowtooth Flounder

Modeled water temperature results

2009 temp data

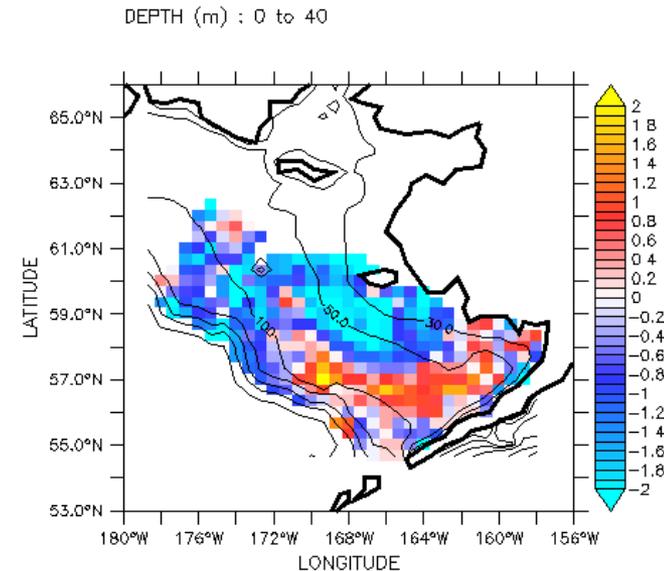

2009 temp_model run16-1weekaves

FERRIER Var 6.71
 NOAA/PMEL TRAP
 16-MPE-2012 11 24:47

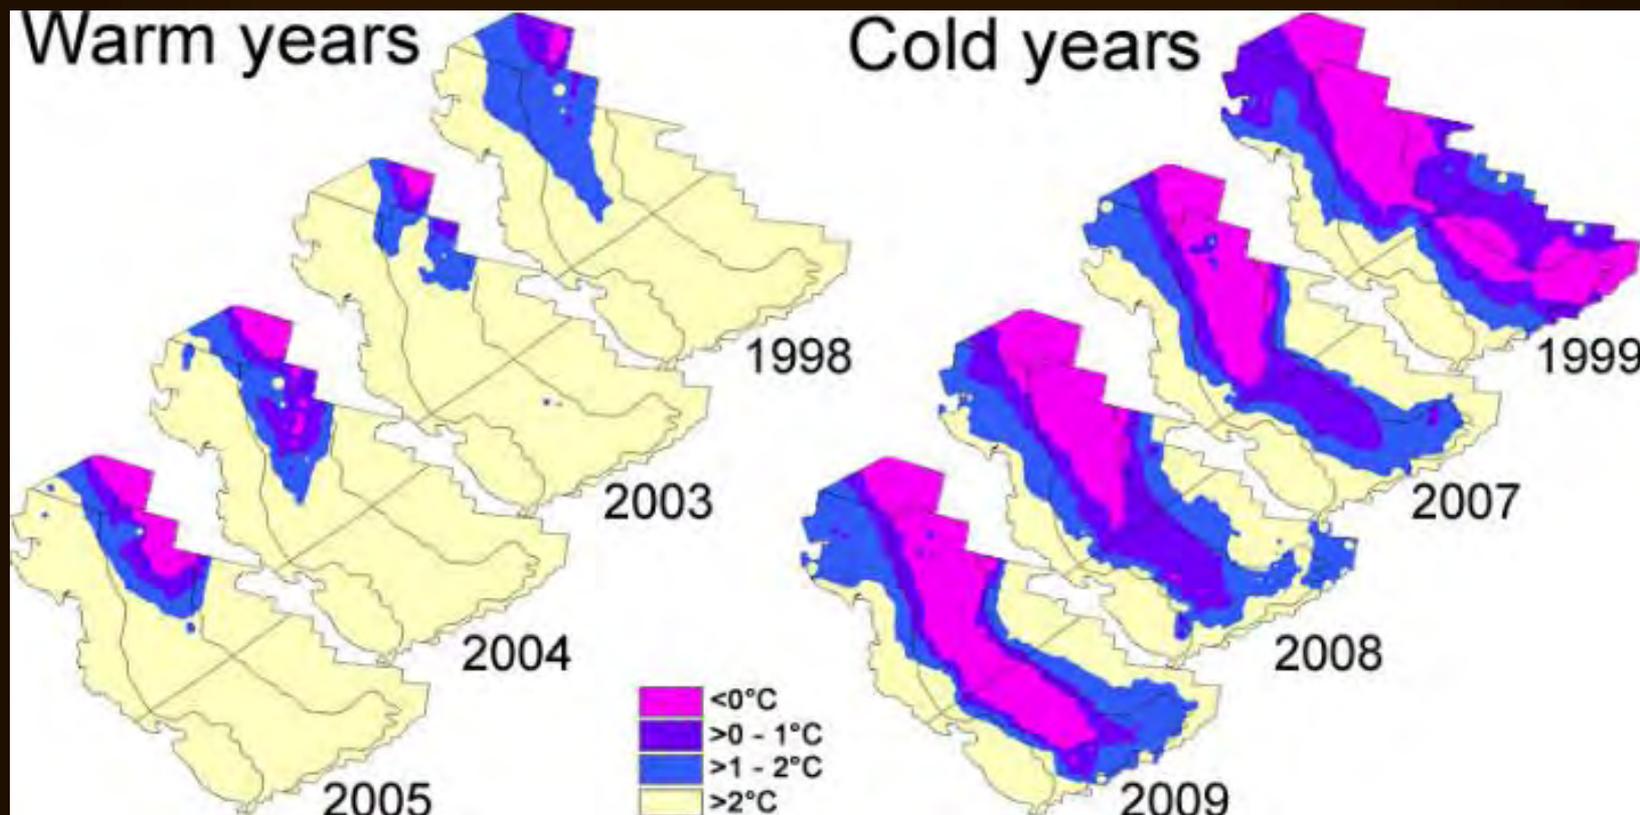

Measured 2009 summer groundfish survey 0-4m water temperature (top left) and ROMS modeled survey temperature (top right), data-model anomalies (bottom).

While there is still a pattern in the resulting anomalies, the overall mean water temperature anomaly is very near zero.

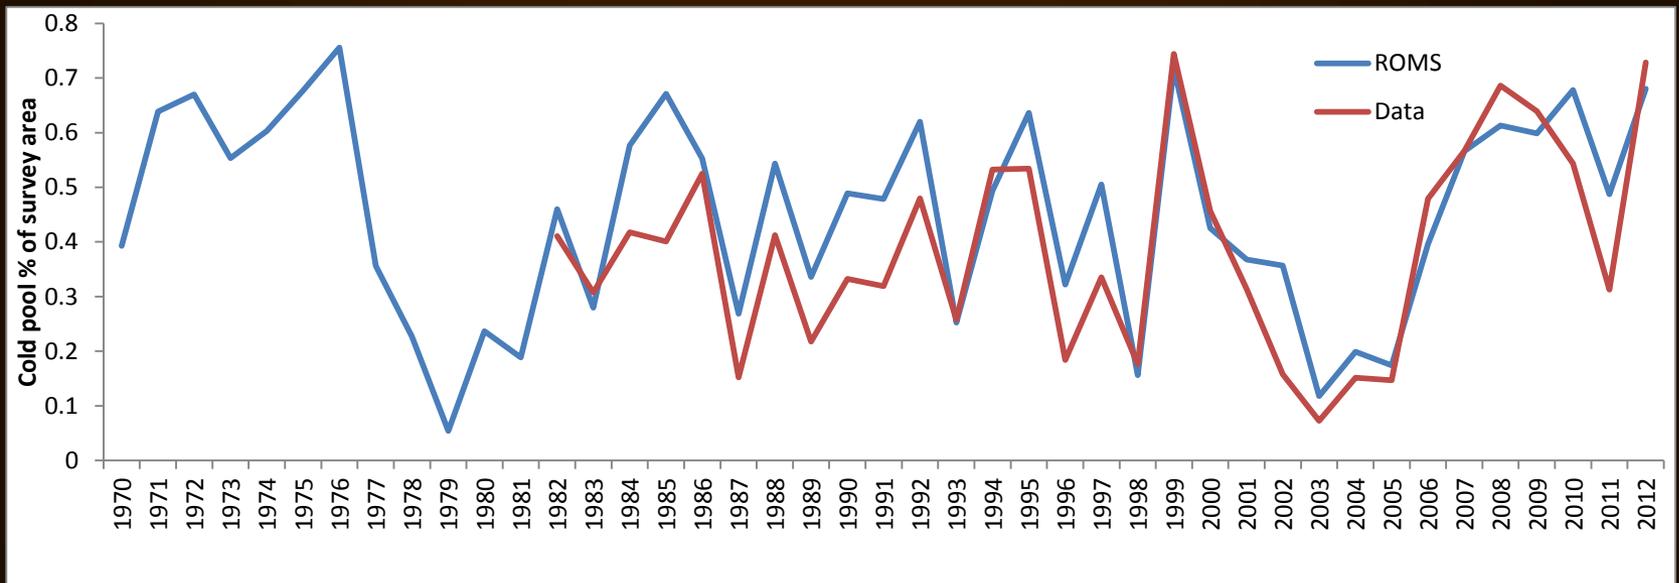

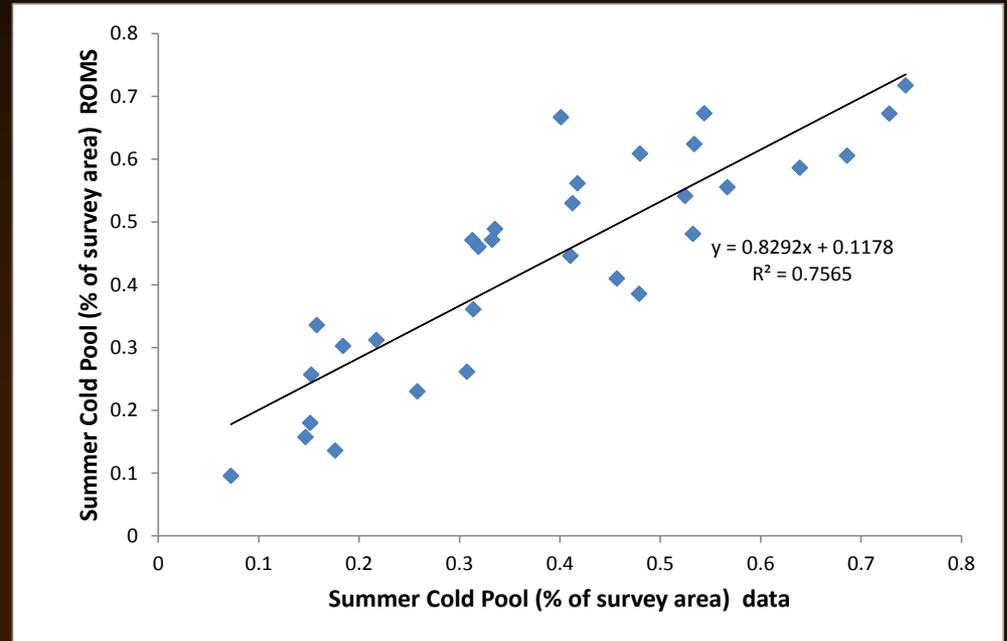

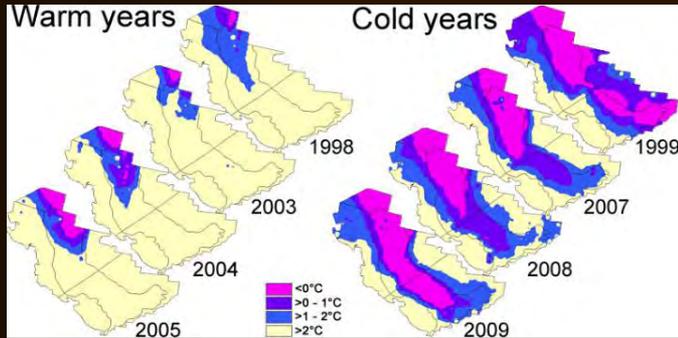

2009 temp_mod-temp_dat run16-1weekaves

Focus on dynamic habitat (e.g. Barbeaux, Spencer et al.)

Modeling fish and fisheries catch

Note: *Catch and Biomass color scales differ by orders of magnitude.*

BSI

BES

http

- **Strengths**

- Functional responses emergent, tied to mechanisms to expand beyond range of current correlations
- Tied to explicit, dominant physical processes
- Considerable advances in modeling ice dynamics and ice-related productivity
- Will predict fisher responses on a community level

- **Issues**

- It's a big, big model

- Computationally challenging (for a fisheries model)
- Needs lots of parameters
- Still needs considerable data comparison

“Competing” methods for recruitment examination
